Company: Etao Assets

Project 2: UPI-based Payment Gateway

System Role: Full-stack Developer

Tech Stack: Node.js (LoopBack), React, PostgreSQL, AWS (EC2, CloudWatch), Jenkins.

Description: A payment service provider facilitating UPI transactions and direct bank transfers, including merchant onboarding and transaction monitoring dashboards.

Responsibilities:

- Transformed requirements into technical workflows.
- Developed and optimized REST APIs and payment page designs.
- Conducted peer code reviews and managed UAT CI/CD using Jenkins.

Duration: 6 Months

Company: Internal

Project 3: CP Adapter

System Role: Backend Developer

Tech Stack: Node.js, Express.js, Keystone 4, MongoDB, Mocha, Chai, Sinon.

Description: A middleware interface between clients and Magento 2 services, converting client inputs into Magento API specifications.

Responsibilities:

- Developed a complete authentication server (OAuth1 provider & consumer).
- Configured and set up Keystone 4.
- Created intermediate APIs and logic to map parameters to new specifications.

Duration: 1 Year

Company: Pine Labs

Project 4: Philippines Government Project

System Role: Backend Developer

Tech Stack: React.js, React Native, WatermelonDB, Koa.js, TypeScript, AWS (EC2, S3), Redis.

Description: Beneficiary Update System & Compliance Verification sub-system for managing beneficiary records and history.

Responsibilities:

- Gathered requirements and developed REST APIs.
- Performed unit testing and code reviews.
- Managed task breakdown (WBS).

Duration: 1 Year

Company: Datamatics

Project 5: Cutest.my

System Role: Backend API Developer

Tech Stack: React Native, Node.js, Express, MongoDB, AWS.

Description: Fashion E-commerce platform for a Malaysian startup.

Responsibilities:

- Developed REST APIs and conducted requirement analysis.
- Performed end-to-end automation testing with Postman.

Duration: 6 Months

Company: Internal

Project 6: Moorah.com

System Role: Backend API Developer

Tech Stack: React.js, Node.js, Express, MongoDB, AWS.

Description: E-commerce platform catering to buyers, sellers, and resellers.

Responsibilities:

- Developed REST APIs and requirement analysis.
- Conducted automation testing with Postman.

Duration: 6 Months

Company: Internal

Project 7: Candidate Management System

System Role: Backend Developer

Tech Stack: React.js, Node.js, Express, MongoDB, AWS, Mocha & Chai.

Description: A comprehensive Lead Management System for hiring processes, managing candidate journeys, roles, and permissions.

Responsibilities:

- Developed REST APIs with JWT authentication.
- Performed requirement analysis, unit tests, and automated testing with Postman.

Duration: 6 Months

Company: Internal

Project 8: Ducandar.com

System Role: Backend Developer

Tech Stack: React.js, Node.js, Express, MongoDB, AWS (EC2, S3).

Description: E-commerce platform allowing users to purchase products across various categories.

Responsibilities:

- Gathered requirements and developed REST APIs, UI, and integration.

Duration: 6 Months

Company: Internal
